

Cedar capping rail

PRODUCT DATA SHEET

When a capping rail is used, it protects the top of the post and ends of the vertical supports on the panel. It adds the finishing touch to our Cequence Slatted fencing panels and is part of our patented three part system.

Fence capping rails add strength and stability to a fence. They look great and give the fencing a contemporary finish.

These Cedar capping rails are often used as handrails as they are such great quality.

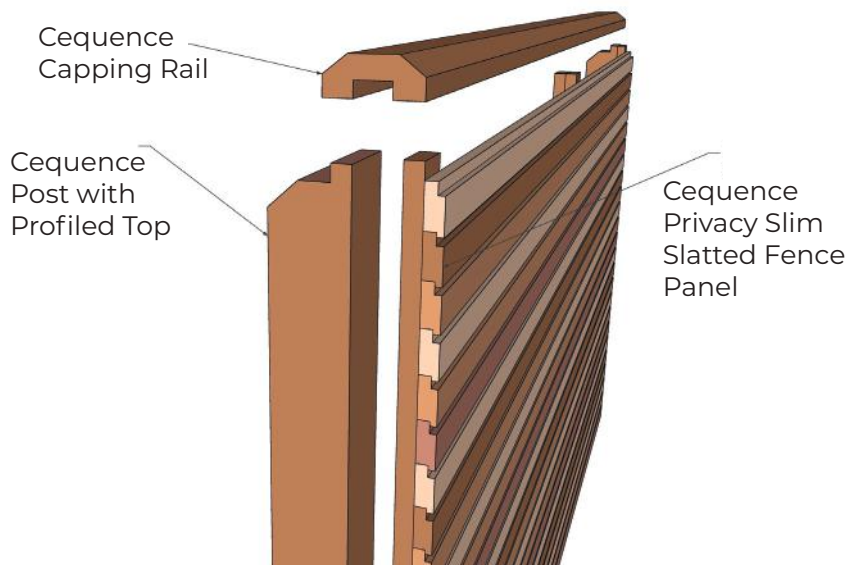

The capping rail is 88mm wide and 38mm thick with a double weathered top.

There is also a 34mm x 15mm rebate in the bottom so that it fits with our fencing.

This capping rail is used as part of our patented Cequence system. The Cedar capping rail fits perfectly on top of our fence panel and post to create a seamless slatted Cedar fence.

KEY FACTS

- High quality Western Red Cedar
