Top Of Wall Posts

Larch top of wall posts are used in conjunction with our Cequence fence panels and capping rails.

Our Larch posts can be installed neatly on top of a garden wall.

A galvanized bar that protrudes from the bottom of the post. This bar can be fixed into a wall using resin anchor glue.

To fix top of wall posts you will need to drill a 25mm hole in the top of your wall. Next you should inject our resin anchor glue into the hole. Finally the post bar can be inserted into the hole.

Resin anchor glue goes off very fast so we recommend that you dry fix your posts first. This gives you the ability to fit several posts at once.

For more detailed info on installing our top of wall posts, please download our top of wall fencing guide.

Use Larch Posts with Cedar fencing. We recommend using Larch posts with Cedar fencing because they are better value than Cedar posts and are more readily available.

Choosing a Larch post treated with Cedar oil means the post will also look exactly like Cedar!

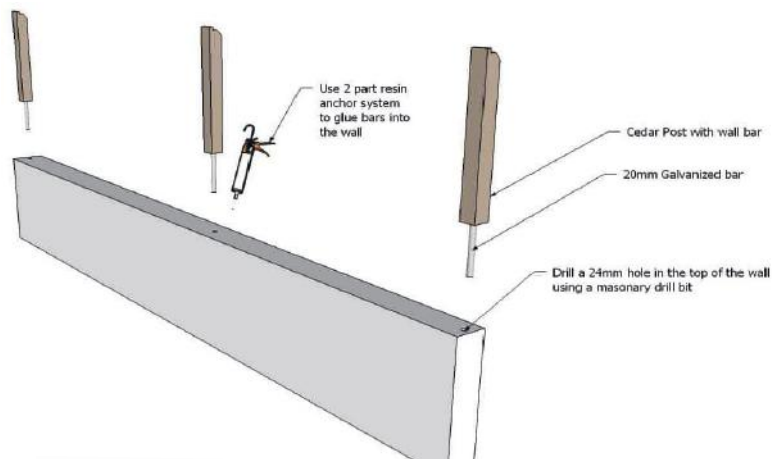

Larch is much more dense than Cedar and stronger when used as a fence post.

KEY FACTS

- Neat solution for top of wall fencing
- Can be used with our Cequence Cedar fence panels
- Available in natural Larch or treated with Cedar oil
- Heights available from 30cm - 120cm height
- Ideal for use with Cedar Battens for DIY slatted fencing

PRODUCT DATA SHEET

Profiled Top Posts

Our Cequence Larch posts have a profiled top for use with our Cequence Cedar panels and capping rails.

The Cequence system allows you to have a seamless slatted fence with no visible posts on the front face. If you are purchasing our Cequence fence panels and want a great value and quality post then our Cequence larch posts are ideal.

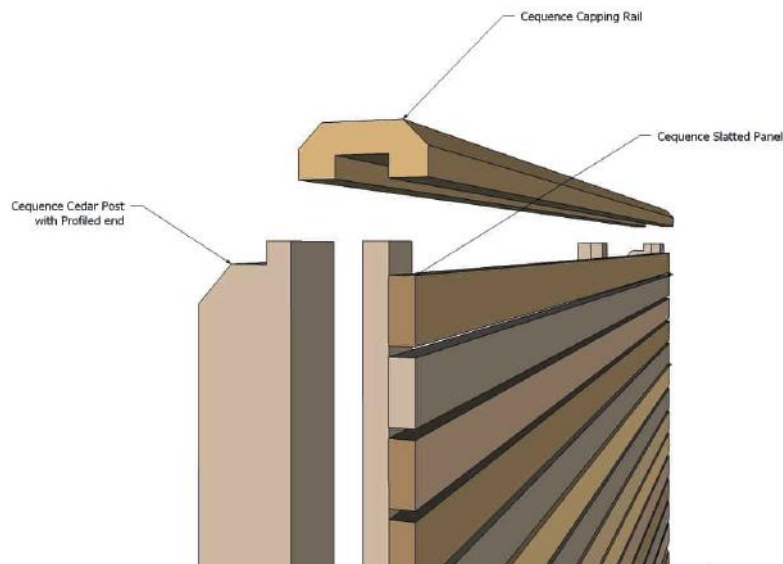

Made from high quality Siberian Larch these fence posts are hard wearing and great looking.

These posts are available stained Cedar colour or Natural Larch.

The Larch used to make this post is hand selected at source in Siberia for quality.

We machine the posts in our workshop and create the profiled top. When you purchase Cequence Larch posts you are buying quality and longevity.

We supply a post saver sleeve with our Larch slotted posts, this is a sleeve that protects the post in the ground giving additional protection and a 20 year guarantee against rot.

KEY FACTS

- Hand Selected Siberian Larch
- For use with Cequence Cedar panels and capping rails
- Comes with free post saver sleeve for Guarantee against rot
- Profiled top for use with Cequence fence panels
- 95mm x 95mm post size
- Supplied natural or treated with Cedar oil
- Great alternative to Cedar posts

Natural Larch Cequence post

Our Larch slotted posts do not require treatment, the wood has natural preservatives within it that protect it from the elements. The only reason to treat your larch posts is if you want to enhance or protect the colour. When left to naturally age Larch fence posts will turn to a silvery grey colour. This is a much sought after look by designers and architects as it brings natural colours into a landscape scheme.

Larch Cequence Post – Treated with Cedar Oil

When using Larch posts with our Cequence Cedar fencing you may want to consider having your posts treated with Cedar oil so that they blend in better. Due to rising Cedar prices it has become very expensive to supply Cedar posts. We therefore now recommend using Larch posts treated with Cedar oil as these are better value and look identical to Cedar posts. We offer the Larch posts ready treated from stock. Simply select from the dropdown menu if you want your Larch fence post treated.
