

Cequence Panels | Double Sided

PRODUCT DATA SHEET

Cequence double sided fencing is a clever system that allows you to have the seamless slatted look on both sides of your fence.

The system comprises of Cedar panels that are fitted back to back with a galvanized post inside the two panels with a Cedar capping rail to finish the top.

The result is a double sided horizontal fence that is only 70mm thick with no visible posts either side of the fence.

This fencing system is suitable for garden boundaries and on top of walls for extra privacy.

Available in either square and bevel edge style panels.

An additional advantage of this fencing is that the two sides of the panels can be fitted in a hit and miss style for maximum privacy.

There are a range of post fixing options available for this system so it can be installed easily on roof tops, walls or even as a balustrade.

Bespoke sized double sided fencing is available for special projects on request.
