

Cedar & Redwood Wall Plates

Flat top

Profiled top

About the wall plates

Sequence wall plates are a great option when you want to fix your fence panels to the side of a building or wall. Sometimes it is not possible to have a fence post because there may be a footing in the way or a paved patio so starting your fence from a wall plate that is fixed against the wall is a great option.

Our Sequence wall plate has the special profiled top on it so that you can use it with our 3 part system. Simply fix it to your wall using stainless steel fixings and you can start your Sequence fencing without the need for a post.

Wall plates can also be used between brick piers to attach our Sequence panels neatly. You can then have a capping rail to finish it off. Often top of wall fencing is fitted between brick piers so having a wall plate fixed each side against the pier makes fitting the panel very easy.

Product Specification

Brand	Sequence
Construction Material	Western Red Cedar or Scandinavian Redwood
Country of Origin	Canada (Cedar) or Europe (Redwood)
Quality Control	In house
Guarantee	20 years (Cedar) or 10 years (Redwood)

Using wall plates for gates

Flat top wall plates are also great for fitting gates. The wall plate can be bolted to a wall to give a secure place to hold your garden gate. As wall plates are narrower than posts this enables you to have a wider gate.

Cedar

Sequence | Canadian Red Cedar | Profiled Wall Plate

Product Code	Post Size (mm)	Length (mm)

About Cedar & Redwood Gravel Boards

Gravel boards are perfect for use within sloping or stepped garden. Our gravel boards look stunning they have wonderful colour and grain. They are very useful to have on hand when fitting a fence in a garden that is not perfectly level. You can use them as needed to deal with height changes and differences in level. Slatted fencing needs to be fitted as level as possible, the horizontal battens should run level, by using gravel boards at the bottom you are able to create a level base to fit your panels to.

These gravel boards are also often used for fascia on garden buildings or can be simply used as a cladding. They are not just gravel boards, so if you need a wide cedar or redwood board these could work for you.

For more details on how gravel boards can be used please get in touch.
